

What is Claimed:

1. A drinking vessel, comprising:
 - a) a mouth interface for delivering a potable liquid;
 - b) a first handled section, said first handled section having a first handle projecting
5 radially from a first outer surface of a first collar, said first collar having an opening to receive said mouth interface;
 - c) a second handled section, said second handled section having a second handle project radially from a second outer surface of said second collar and being removably connected to said first handled section;
 - 10 d) a container for holding a potable liquid, said container having a longitudinal axis and being removably connected to said first handled section; and wherein said first handle and second handle are adjustable to be oriented at a fixed angle.
- 15 2. The drinking vessel of claim 1, wherein said first handle and second handle are adjustable with respect to said axis without said first handled section being disassembled from said container.
3. The drinking vessel of claim 1, wherein said first handle and second handle are
20 adjustable to a plurality of fixed angles with respect to said axis.
4. The drinking vessel of claim 3, wherein said fixed angle is chosen from 45°, 90°, 135°, 180°, 225°, 270°, 315° and 360°.
- 25 5. The drinking vessel of claim 1, wherein said mouth interface is chosen from a nipple and a spout.
6. The drinking vessel of claim 1, wherein said first handle and said second handle are covered by an elastomer.
- 30 7. A drinking vessel for juveniles, comprising:
 - a) a mouth interface for delivering a potable liquid;
 - b) a first handled section, said first handled section having a first handle projecting radially from a first outer surface of a first collar, said first collar having a first inner surface, a bottom rim and an opening to receive said mouth interface;

c) a plurality of snap grooves located on a circumference of said bottom rim of said first collar;
d) a guide channel located on and encircling said outer surface of said first collar;
e) a second handled section, said second handled section having a second handle project radially from a second outer surface of said second collar and being
5 removably connected to said first handled section, said second collar having a second inner surface;
f) a plurality of guide ribs, said guide ribs being located on the second inner surface of said second collar and configured to engage said guide channel;
10 g) a plurality of snap tabs, said snaps located on the second inner surface of said collar and configured to engage said snap grooves;
h) a container for holding a potable liquid, said container having a longitudinal axis and being removably connected to said first handled section; and
wherein said first handle and second handle are adjustable to be oriented at a fixed
15 angle.

8. The drinking vessel of claim 7, wherein said first handle and second handle are adjustable with respect to said axis without said first handled section being
20 disassembled from said container.

9. The drinking vessel of claim 7, wherein said first handle and second handle are adjustable to a plurality of fixed angles with respect to said axis.

10. The drinking vessel of claim 9, wherein said fixed angle is chosen from 45°, 90°,
25 135°, 180°, 225°, 270°, 315° and 360°.

11. The drinking vessel of claim 7, wherein said mouth interface is chosen from a nipple and a spout.
